

TIC and NuWave

The HPE NonStop Modernization Dream Team

Working together to deliver superior connectivity solutions.

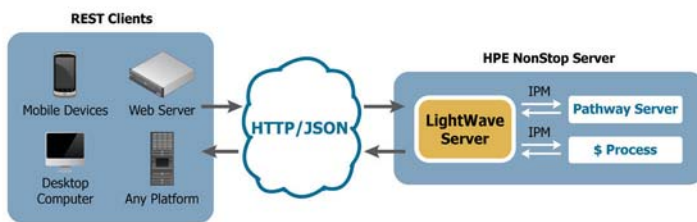

TIC Software and NuWave Technologies have been collaborating to deliver high-quality Web services solutions to NonStop customers since the early 2000s. NuWave designs and develops intuitive middleware solutions at a great value, while TIC manages customer relationships and provides first-level support. TIC has been very active in educating the NonStop community on how to use Web services to add value to their businesses, and they can even assist with software installation, configuration, and proofs of concept when users need assistance. Because NuWave and TIC have worked together for so long and both have a customer-centric approach to their businesses, the combined customer service is seamless and is unmatched in the space. In the end, you get superior, game-changing modernization solutions with minimal stress.

Product overviews

NuWave strives to stay at the forefront of NonStop innovation, and they have done just that with their latest solutions, LightWave Server™ and LightWave Client™, which make integrating with any platform, including modern devices, easy.

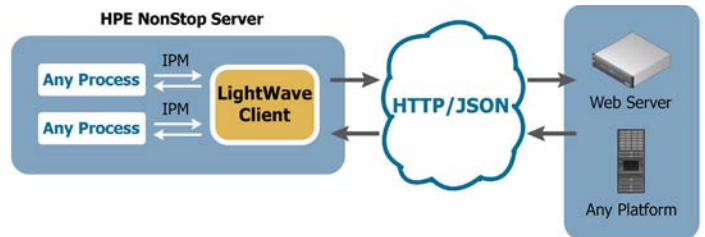

These new products are the perfect complement to their SOAPam® products, which are still in high-demand. However, instead of SOAP, the LightWave products utilize REST APIs to facilitate the exchange of data between NonStop applications and applications running on disparate systems, including PCs and mobile devices.

LightWave Server™

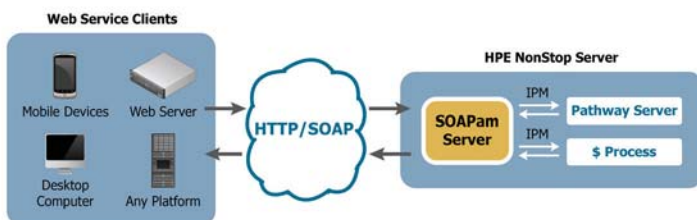

LightWave Server™ allows you to expose your existing standalone processes and Pathway TS/MP server classes as industry-standard REST services.

LightWave Client™

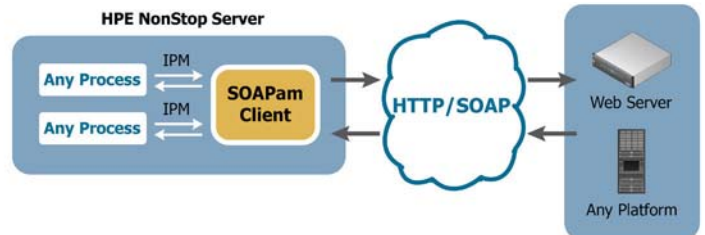

LightWave Client™ allows applications running on NonStop servers to securely access REST Web services on any platform.

SOAPam® Server™

SOAPam® Server allows you to expose your existing standalone processes and Pathway TS/MP serverclasses as industry-standard Web services.

SOAPam® Client

SOAPam® Client allows NonStop applications to access, or “consume,” Web services on any platform anywhere in the world.

About NuWave

NuWave Technologies is known for providing exceptional middleware solutions for customers in the HPE NonStop space. NuWave’s middleware is chosen over similar products because of the high quality, low total cost of ownership (TCO), and built-in security. NuWave is constantly striving to provide the best software available by staying at the cutting-edge of industry advancements. Their innovative and intuitive solutions allow HPE NonStop customers to better serve their employees, partners, and customers.

About TIC Software

Since 2004, TIC Software has partnered with NuWave to deliver first-rate SOAP and REST Web service solutions to NonStop users worldwide. TIC Software helps clients understand how best to leverage the latest technologies and customizes them with a complete suite of services, including training, development, and support optimized for the client’s needs.
